 ANTARCTIC DIVISION

CONTOURS: 25 metres
 HORIZONTAL DATUM: World Geodetic System 1984
 VERTICAL DATUM: Mean Sea Level
 Contours have been derived from Russian maps - values have not been verified and should be used with caution.

UNIVERSAL TRANSVERSE MERCATOR PROJECTION
 GRID ZONE 42
 HEIGHTS ARE APPROXIMATE, IN METRES
 To convert heights above the WGS84 spheroid obtained from Doppler satellite observations to heights above sea level, subtract 25 metres.

- Contours on ice
- Contours on ice-free area
- Floating glacier tongue
- Melt Lake
- Rocks
- Elevation on rock
- Elevation on ice
- Monumented control station
- Scientific station
- Oversnow route (unmarked)

HOW TO QUOTE A GRID REFERENCE FOR A PARTICULAR POINT
 Eg. Mount Loewe
 1. Quote this map: BEAVER LAKE
 2. Locate the VERTICAL grid line to the left of the point: 50
 3. Estimate kilometres from the grid line to the point: .45
 4. Locate the HORIZONTAL grid line below the point: 70
 5. Estimate kilometres from the grid line to the point: .37
 Thus, the reference for Mount Loewe is:
 BEAVER LAKE 50457037

Produced in November 1990 by the Australian Surveying and Land Information Group, Department of Administrative Services for the Australian Antarctic Division.
